APPENDIX A

In an exemplary embodiment, the following error codes are generated by the SOAP

service associated with the invention.

Error Code	Error Description	Meaning
0x80041b00	Error generating XML Document object for Administrator element	The Administrator element in the calling SOAP request was not valid XML.
0x80041b01	Invalid Administrator	The encrypted account ticket supplied did not correspond to that of a valid account user.
0x80041b02	Domain Already Managed	A Namespace Reserve request was received for a domain that was already managed.
0x80041b03	Domain Error – not managed	A request other than Namespace Reserve was received, but the specified domain was not managed.
0x80041b04	Domain Error - not managed by this affiliate	The specified domain was managed by an affiliate other than that whose site ID was provided.
0x80041b05	Invalid Namespace Administrator Sign in Name	The Namespace Administrator name specified in a Namespace Reserve request was invalid; either not in the

		requested domain, or no domain specified
0x80041b06	Invalid Affiliate Administrator Name	The Affiliate Administrator name specified in a Namespace Reserve request was invalid; either not in the affiliate domain, no domain specified, or could not find an account credential.
0x80041b07	Error generating XML Document Object for request	The supplied SOAP request was not valid XML
0x80041b08	Invalid Domain Element or Invalid SiteID Element	The specified subelement of the supplied <Authorization> node was missing
0x80041b09	Invalid domain	The specified domain was invalid, either zero length, more than 129 characters, invalid character, or not a valid first-tier domain (more than one dot).
0x80041b0a	Invalid Action parameter	The <Action> parameter specified for an Edit Admin List request was something other than 'Add' or 'Delete'
0x80041b0b	Invalid Version Parameter	The <ClientVersion> parameter was unrecognized
0x80041b0c	Managed domain may only	Attempt to Release a

	be deleted by affiliate administrator	domain by a namespace administrator
0x80041b0c	Invalid administrator to be added/deleted – namespace administrator cannot add/delete affiliate administrator	Attempt to add or delete an affiliate administrator by a namespace administrator
0x80041b0d	Invalid User - not in managed domain	Attempt to remove a member not in the managed domain
0x80041b0d	User Already Present	Attempt to signup a member already managed
0x80041b0d	Invalid User Name	Attempt to signup a member with an invalid user name – either no domain, or not in the managed domain
0x80041b0e	Error retrieving SignInName Element	The <SignInName> element in a Signup request was not valid XML
0x80041b0f	varies	A required parameter was not present
0x80041b10	InvalidSiteID - not a namespace affiliate	The affiliate owning the specified Site ID is not a namespace affiliate or no affiliate could be found with the specified Site ID
0x80041b11	Invalid SiteID - Not Numeric	Self-explanatory
0x80041b12	Administrator Ticket has expired – need to revalidate	Self-explanatory

0x80041b13	Error nnnn during rollback of NameSpaceReserve. Previous error code: nnnn Description: <error description>	A double error has occurred. After successfully reserving a namespace, an error occurred in marking one of the administrators, then another error occurred while releasing the namespace.
0x80041b14	Type Parameter Invalid	The <Type> parameter supplied for an Enumerate Administrators request was something other than 'Both', 'Namespace', or 'Affiliate'
0x80041b15	Invalid administrator to be added - already an administrator	Self-explanatory
0x80041b16	Invalid administrator to be deleted - can't delete last administrator in domain	Self-explanatory
0x80041b17	Invalid administrator to be deleted - requesting administrator can't delete self	Self-explanatory
